This is an R Markdown presentation. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see <http://rmarkdown.rstudio.com>.

When you click the **Knit** button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document.

Beamer Presentation Template

Two Column Layout

Title of the
Talk

Author's name

Introduction

Advanced
code

References

This slide has two columns.

In Beamer, each column in
between `\begincol` and
`\endcol`.

In HTML, the `{.columns-2}`
option is added to the slide
title and `<p`

`class="forceBreak"></p>`
allows forcing column break.

Documentation

code

References

See [R Markdown: The Definitive Guide](#) for full documentation about HTML slides.

Note:

- `{.flexbox .vcenter}` to center the HTML slide with plot.
- `out.width='90%'` to reduce the size of the plot in the Two Column Layout slide.

Keep the code below to have a slide for references, allow two-column slides in *ioslides* (but not in *Slidy*) and allow scrolling oversized slides.
