## R Markdown

#### Author's name

#### Introduction

Advanced code

References

This is an R Markdown presentation. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see http://rmarkdown.rstudio.com.

When you click the **Knit** button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document.

# Beamer Presentation Template

#### Author's name

#### Introduction

Advanced code

References

This template has the same features as others in the **memoiR** package except for multi-language support (no lang item in the header).

See the code of the following slides for some specific code of slides.

# Two Column Layout

#### Author's name

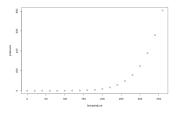

Introduction

Advanced code

References

This slide has two columns. In Beamer, each column in between \begincol and \endcol.

In HTML, the {.columns-2} option is added to the slide title and allows forcing column break.

### Documentation

Author's name

Introduction

Advanced code

References

See R Markdown: The Definitive Guide for full documentation about HTML slides.

### Note:

- {.flexbox .vcenter} to center the HTML slide with plot.
- out.width='90%' to reduce the size of the plot in the Two Column Layout slide.

Keep the code below to have a slide for references, allow two-column slides in *ioslides* (but not in *Slidy*) and allow scrolling oversized slides.
