This is an R Markdown presentation. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see http://rmarkdown.rstudio.com.

When you click the **Knit** button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document.

Two Column Layout

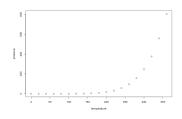

Author's name

First Part
Second part
References

This slide has two columns. In Beamer, each column in between \begincol and \endcol.

In HTML, the {.columns-2} option is added to the slide title and allows forcing column break.

References

See R Markdown: The Definitive Guide for full documentation about HTML slides.

Note:

- {.flexbox .vcenter} to center the HTML slide with plot.
- out.width='90%' to reduce the size of the plot in the Two Column Layout slide.

Keep the code below to have a slide for references and allow two-column slides in *ioslides* (but not in *Slidy*) and allow scrolling oversized slides.
